1. The following is an examiner's statement of reasons for allowance: Kuhl et al. (3,637,249) shows a vacuum housing (14) and a plunger (22) having an internal bore (20) wherein the plunger movable within the housing and biased by a spring (36). Kuhl et al. (3,637,249) states that "the air passage 20 through the stem 18 may be provided with a relatively small opening as restriction 46 for the purpose of limiting the air flow through the air passage 20 to the vacuum head 2....." (lines 9-16). Another reference, Bru (3,834,558) also shows a vacuum-gripping device having a piston (10) movable within a housing and a vacuum cup 11 to grip an object. However, the application recites in claim 5, the last three lines, "the plunger is moved to an extended position upon the flow of air through the second port through the plunger housing internal bore and through the plunger housing first opening". The extended position of the plunger of the application occurs after the air flows through the second port. Therefore, Kuhl et al. device or Bru (3,834,558) does not show or suggest the structural limitation of "the plunger being moved to an extended position upon the flow of air through the second port through the plunger housing internal bore and through the plunger housing first opening". The modification of Kuhl et al. (3,637,249) or Bru (3,834,558) by combining a secondary reference, either Blatt (3,349,927) or Hansen (3,716,307), would not meet the claim structural limitations since Kuhl et al. (3,637,249) or Bru (3,834,558) is incapable of extending the position of the plunger by flowing the air through its second port.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
